BRAYDEN BENARD

Dallas–Fort Worth Area | 409-888-0599 | braydenbenard7@gmail.com | linkedin.com/in/brayden-b-5b06a632b/

OBJECTIVE

Detail-oriented Systems Technology student seeking a software engineering or cloud/infrastructure-focused internship where I can apply experience with Python, Kubernetes, distributed systems, and full-stack development to build scalable, reliable systems while continuing to grow in backend and DevOps engineering.

TECHNICAL SKILLS

Programming: Python, SQL, JavaScript, TypeScript, Java

Frameworks & Tools: Flask, React, Git, Docker, Kubernetes

DevOps & Cloud: Kubernetes API, Containerization, Microservices, REST APIs, Logging, Monitoring, Health Checks

Systems: Linux, TCP/IP, Networking Fundamentals, Debugging, Troubleshooting, Distributed Systems Concepts

EDUCATION

University of Texas at Dallas — Bachelor of Science, Systems Technology — Expected May 2027

College of the Mainland — Associate of Arts, General Studies (May 2023)

CERTIFICATIONS

Software Engineering Certificate — Coursera (In Progress)

• Coursework includes SDLC, testing, version control, system design, and agile methodologies.

PROJECT EXPERIENCE

Kubernetes Cluster Health MCP Server (Python, Kubernetes API)

• Engineered a Model Context Protocol (MCP) server to evaluate Kubernetes cluster health across nodes, pods, deployments, and resource utilization.

• Implemented automated health checks and structured logging to accelerate troubleshooting and root cause analysis.

• Containerized and deployed using Docker within Kubernetes for portability and consistent runtime behavior.

TFT Stats Analytics Platform (Docker & Kubernetes)

• Built a containerized analytics pipeline to process gameplay statistics using Docker and Kubernetes orchestration.

• Managed deployments, pod scaling, service networking, and resource allocation to maintain reliability.

• Implemented logging and monitoring workflows to diagnose service interruptions and performance bottlenecks.

• Troubleshot inter-service communication and container networking issues.

Full-Stack Task Management Application (Flask, React, SQL)

• Developed a full-stack web application with RESTful API architecture and secure CRUD functionality.

• Optimized SQL queries and schema design to improve performance and scalability.

ADDITIONAL EXPERIENCE

Amazon — Warehouse Associate | La Marque, TX (Oct 2023 – Aug 2024)

• Operated in a high-volume logistics environment while maintaining accuracy and resolving workflow disruptions under time constraints.

Authorized to work in the U.S. with no restrictions.
